

ARTIFICIAL INTELLIGENCE & LAW ENFORCEMENT

The course aims to explore the transformative role of Artificial Intelligence (AI) in modern law enforcement practices. Students will learn about different aspects of AI and how it functions in today's society, then examine how AI technologies are deployed for crime prevention, investigation, predictive policing, surveillance, and forensic analysis. The goal is to prepare learners to understand both the opportunities and challenges of integrating AI into policing, considering operational effectiveness, ethical dilemmas, policy implications, and public trust. **Bring a laptop if available.*

TOPICS COVERED:

- AI used in open-source investigations
- Discover different ways Deepfakes are used in criminal behavior
- Legal Standards and Due Process
- Public Trust and Community engagement
- Future trends & challenges with AI
- Drone utilization of AI technologies
- Technology terms, acronyms & how it's developed and works
- Understand the fundamental concepts of AI and its applications in law enforcement
- Evaluate the ethical, legal, and societal implications of AI deployment in policing
